UK Porting Procedure

Number porting is a change in the CP (Communications Provider) or Current Network Operator (CNO) of the inbound routing of a telephone number. UK number porting is made technically possible by onward routing, where the number(s) to be ported are prefixed by the rangeholder or host network operator for the rangeholder with a number porting prefix for the gaining network operator. When a call is placed to the ported number after the porting prefix has been applied the call is then routed directly to the gaining network operator via the designated points of interconnect agreed under the service establishment between the new network operator and the host network or rangeholder.

As such number porting does not change the Ofcom-allocated RH (Range Holder) of a number, as the calls will usually always route through the RH systems or the RH's host network operator.

Pure IP use BT IPEX (BT IP Exchange) for most UK porting requests for the Pure IP platform. BT IPEX have arguably the widest SE (Service Establishment) with rangeholders and host networks, enabling Pure IP to facilitate the porting of most UK landline and non-geographic telephone numbers, particularly from the larger tier 1 network operators.

Information Provided to Customers

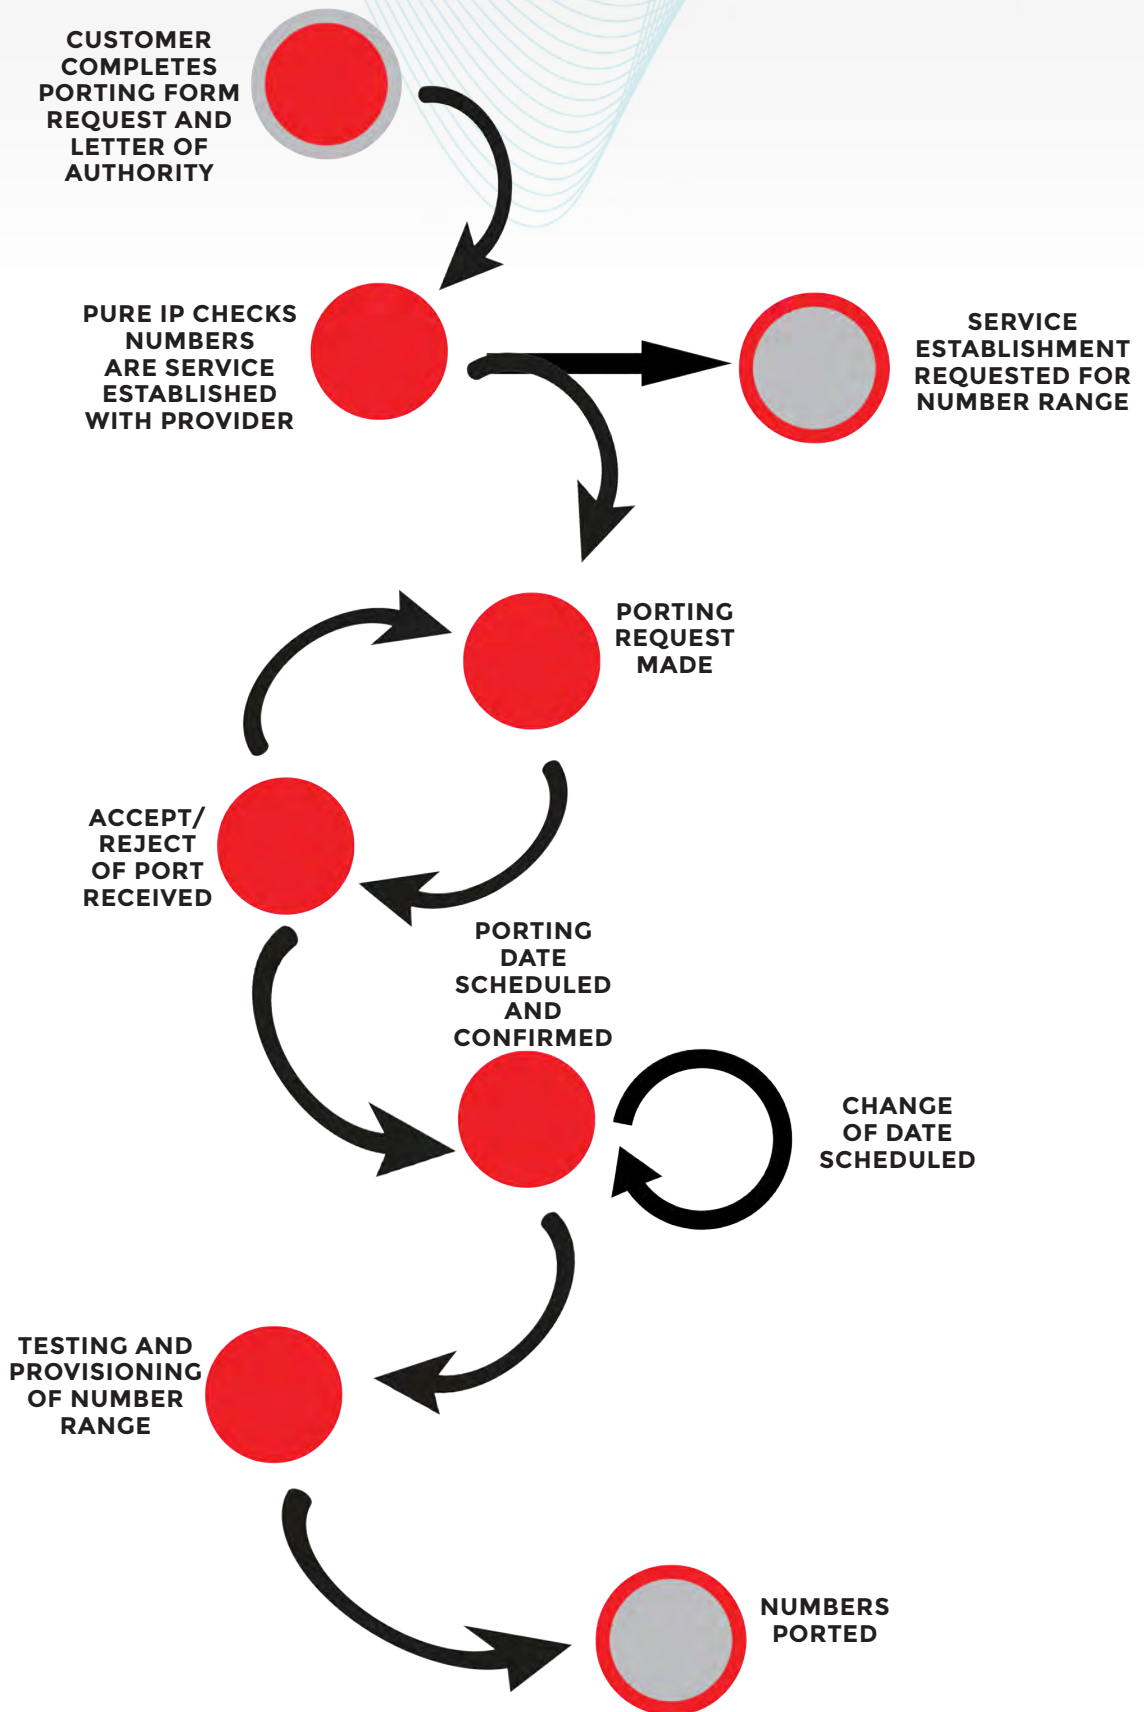

Pure IP will need to obtain the following information:

- Signed LOA (sample to right)
- Recent invoice from current supplier
- Requested porting date - 25 working day lead time

**(GNP Letter of Authority
Direct Dialling In (DDI) Letter of Authorisation)**

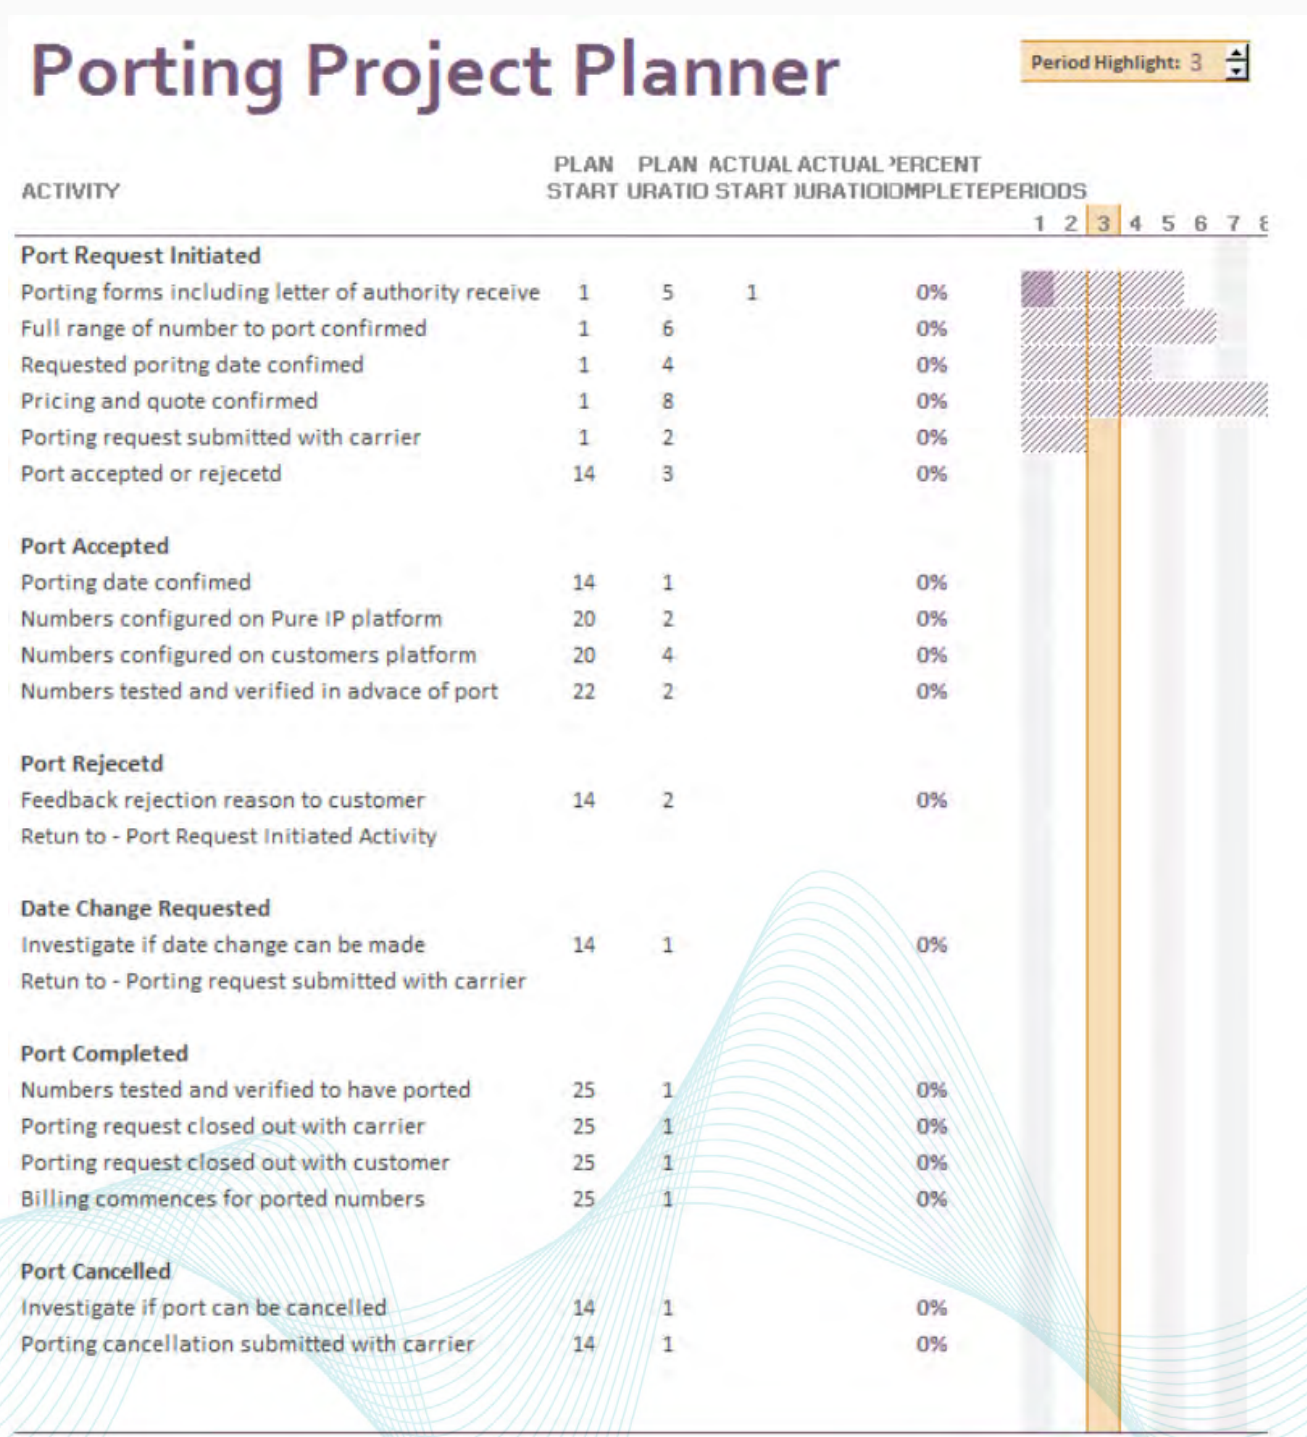

To:		From: Gaining Operator BT Wholesale IP's
